Name	Description
 Azure	The Azure portal is a unified, web-based interface that enables users to manage, monitor, and configure all their Azure services and resources in one place.
 Exchange	Manage advanced email settings, such as quarantine, encryption, and mail flow rules.
 Intune	A single management experience for the End User Computing team as it to ensure employees' Microsoft 365 devices and apps are secured, managed, and current.
 Microsoft 365 app	Manage, configure, and monitor deployment of Microsoft 365 Apps for your organization.
 Microsoft Entra	Use the Microsoft Entra admin center to manage identities, permissions, and network access.
 Microsoft Purview	Use the Microsoft Purview portal to manage data security, data governance, and risk and compliance solutions for all your data, across multiple cloud platforms and apps.
 Power Platform	Manage and support automation, virtual agents, and data analysis with Power Apps, Power Automate, and Dynamics 365.
 Search & intelligence	Manage Microsoft Search settings including services and content that are available for people in your organization. Make finding internal tools, documents, and people just as easy as searching the web in Bing.
 Security	Use Microsoft 365 Defender for unmatched visibility into threats to your network and your security posture. Respond to incidents, proactively hunt for threats, track assets, and deploy security policies.

Default Office theme

Default Office theme

Dark Gray

This policy setting allows you to select the user interface (UI) theme of Office, if the user has not already selected an Office theme.

Note: This setting only applies to Version 1903 or later of Office.

If you enable this policy setting, you may choose the Office theme in cases where the user has not selected an Office theme themselves.

If you disable or do not configure this policy setting, Office will use the Colorful theme in cases where the user has not selected an Office theme themselves.

Regardless of how you configure this policy setting, users can change their Office theme by going to File > Account > Office Theme (or, in Outlook, going to File > Office Account > Office Theme).

Note: The "Default Office theme" policy setting located under Configuration takes precedence over this policy setting.

Resources

Admins can manage two types of resources: room mailboxes and equipment mailboxes. Room mailboxes are assigned to a physical location, such as a conference room or auditorium. After an admin creates room mailboxes, users can reserve rooms by including them in meeting requests. Equipment mailboxes are assigned to resources that aren't location specific, such as a portable computers, projectors or company cars, allowing users to reserve them in meeting requests.

Create a site: Select the site type

Select the type of site you want to create [learn more about team sites](#) or [learn more about communication sites](#)

Team site

Create a private space to collaborate with your team.

- Track and stay updated on project status
- Share team resources and co-author content
- All site owners and members publish site content
- Can connect to other Microsoft 365 products

Communication site

Share information that engages a broad audience.

- Create a portal or subject-focused site
- Engage dozens or thousands of viewers
- Few content authors and many site visitors

Browse more sites

Select another site, such as a publishing portal or a non-connected team site.

Syntex content center

Create and manage enterprise models in a content center.

Go to Migration Manager

Migrate your content from on-premises sites, file shares, or other services.

Give your site a name

Decide on a unique name that follows your organization's naming standards. The description is optional, but useful for people to understand what your site is for.

Your team site will be connected to a Microsoft 365 group, which gives your site a shared OneNote notebook, group email address, and team calendar.

MDM

Enable automatic MDM enrollment using default Azure AD credentials

Edit [policy setting](#)

Requirements:
At least Windows 10

Description:

This policy setting specifies whether to automatically enroll the device to the Mobile Device Management (MDM) service configured in Azure Active Directory (Azure AD). If the enrollment is successful, the device will remotely managed by the MDM service.

Important: The device must be registered in Azure AD for enrollment to succeed.

If you do not configure this policy setting, automatic MDM enrollment will not be initiated.

If you enable this policy setting, a task is created to initiate enrollment of the device to MDM service specified in the Azure AD.

If you disable this policy

Extended / Standard

Setting	State	Co
Enable automatic MDM enrollment using default Azure AD c...	Not configured	
Disable MDM Enrollment	Not configured	

Windows 10

URL & click protection settings

[Configure](#) your Safe Links URL and click protection settings for this policy. For more information, see [Safe Links in Microsoft Defender for Office 365](#).

Email

- ☒ On: Safe Links checks a list of known, malicious links when users click links in email. URLs are rewritten by default.
 - ☒ Apply Safe Links to email messages sent within the organization
 - ☒ Apply real-time URL scanning for suspicious links and links that point to files
 - ☒ Wait for URL scanning to complete before delivering the message
 - ☒ Do not rewrite URLs, do checks via Safe Links API only.

Do not rewrite the following URLs in email (0)

[Manage 0 URLs](#)

Teams

- ☒ On: Safe Links checks a list of known, malicious links when users click links in Microsoft Teams. URLs are not rewritten.

[Back](#)

[Next](#)

- **Monitor** and **Block** actions might cause a significant delay in message delivery. [Learn more](#)
- **Dynamic Delivery** is only available for recipients with hosted mailboxes.
- For **Block** or **Dynamic Delivery**, messages with detected attachments are quarantined and can be released only by an admin.

- ☐ Off - Attachments will not be scanned by Safe Attachments.
- ☐ Monitor - Deliver the message if malware is detected and track scanning results.
- ☒ Block - Block current and future messages and attachments with detected malware.
- ☐ Dynamic Delivery (Preview messages) - Immediately deliver the message without attachments. Reattach files after scanning is complete.

Quarantine policy

AdminOnlyAccessPolicy

Permission to release quarantined messages will be ignored for messages with malware detected and we will fall back to release instead.

Redirect messages with detected attachments

Enable redirect only supports the Monitor action.

☒ Enable redirect 

Send messages that contain monitored attachments to the specified email address. *

Attack simulation training

Overview Simulations Training Reports Automations Co

Top actions to help you get started

Create a simulation

Launch your first simulation on yourself or on a closed group. You can view the reports after running a simulation.

Required 3 1/2 min

Launch instant simulation

Launch your own simulation

Explore Payload library

Explore range of contents and payloads available based on various types of social engineering techniques. You can also create your own and customize the default one.

Employment Library

Discrete Formulation

Create your own simulation

Create your on simulation by selecting from the following options

- ☐ Run multiple simulations using automatically-determined techniques and payloads that launch when the specified conditions are met.
- ☒ Launch a single simulation using a specified technique and payload.

[Continue](#)

Select technique

Select the social engineering technique you want to use with this simulation. We've curated these from the MITRE Attack framework. Depending on your selection, you will be able to use certain types of payloads.

Credential Harvest

In this type of technique, a malicious actor creates a message, with a URL in the message. When the target clicks on the URL within the message, they are taken to a web site, the website often...

[View details of Credential harvest](#)

Malware Attachment

In this type of technique, a malicious actor creates a message, with an attachment added to the message. When the target opens the attachment, they are typically given some arbitrary code such as a macro...

[View details of Malware attachment](#)

Link in Attachment

In this type of technique, which is a hybrid of a Credential Harvest and Malware Attachment, a malicious actor creates a message, with an attachment, and then inserts the attachment into the message. When the target opens the attachment, they are represented with a URL to the attachment...

[View details of Link in attachment](#)

Link to Malware

In this type of technique, a malicious actor creates a message, with an attachment added to the message. However instead of directly inserting the attachment into the message, the malicious actor will host the attachment on a well-known file sharing site, (such as SharePoint, or Dropbox) and insert the URL to the attachment file path...

Copilot

Policies

Use data loss prevention (DLP) policies to help identify and protect your organization's sensitive info. For example you can set up policies to help make sure information and docs isn't shared with the wrong people. [Learn more about DLP](#)

 **Set up pay-as-you-go billing.** To use some data loss prevention policy features, you must first link an Azure subscription for pay-as-you-go billing. Your org will be charged based on usage. [Learn more about pay-as-you-go billing](#)

 Policy not enforced

Safeguard sensitive data in Microsoft 365 Copilot interactions

Purview now offers granular Copilot controls, allowing admins to block all processing or allow internal knowledge access while blocking web searches when sensitive data is detected. The default DLP policy is currently in simulation mode and can be turned on to restrict Copilot from processing sensitive prompts or performing web searches.

Prompt risk summary
Once this policy is enforced, Copilot will not process interactions that contain the selected sensitive information

Policy mode

You can test this policy before turning it on to verify if it needs improvement or if it meets all your objectives. If you turn the policy off, you can edit it later and safely test those changes in simulation mode.

 At this time, simulation mode isn't supported for these locations you selected: On-premises file repositories.

☐ Run the policy in simulation mode

We'll show you items that match the policy's conditions to help you evaluate its impact. Your data won't be affected; the policy stays off while in simulation mode. [Learn more about simulation mode](#)

☐ Show policy tips while in simulation mode

☐ Turn the policy on if it's not edited within fifteen days of simulation

☒ Turn the policy on immediately

After creation, the policy will be turned on and begin enforcing changes once applied to the location.

☐ Leave the policy turned off

Decide to test or activate the policy later.

Actions

Use actions to protect content when the conditions are met.

Restrict access or encrypt the content in Microsoft 365 locations

- ☒ Block users from receiving email, or accessing shared SharePoint, OneDrive, Teams files, Fabric and Power BI items.
By default, users are blocked from sending Teams chats and channel messages that contain the type of content you're protecting. But you can also block users from receiving emails or accessing files shared from SharePoint, OneDrive, Teams, Fabric and Power BI items.
 - ☒ Block everyone
 - ☐ Block only people outside your organization

+ Add an action

User notifications

Use notifications to inform your users and help educate them on the proper use of sensitive info.

☒ On

Email notifications

and docs isn't shared with the wrong people. [Learn more about DLP](#)

Set up pay-as-you-go billing. To use some data loss prevention policy features, you must first link an Azure subscription for pay-as-you-go billing. Your org will be charged based on usage. [Learn more about pay-as-you-go billing](#)

Policy not enforced

Safeguard sensitive data in Microsoft 365 Copilot interactions

Purview now offers granular Copilot controls, allowing admins to block all processing or allow internal knowledge access while blocking web searches when sensitive data is detected. The default DLP policy is currently in simulation mode and can be turned on to restrict Copilot from processing sensitive prompts or performing web searches.

Enforce policy

Prompt risk summary
Once this policy is enforced, Copilot will process interactions that contain sensitive information.
