December 31st, 2024 marked the end of Microsoft Intune support for Android device administrator management on devices with access to Google Mobile Services (GMS). Use alternate Intune Android management instead. [Learn more about ending support for Android device administrator.](#)

Specify the platform configuration restrictions that must be met for a device to enroll. Use compliance policies to restrict devices after enrollment. Define versions as major.minor.build. Version restrictions apply to devices enrolled with the Company Portal. Intune classifies devices as personally-owned by default. Additional action is required to classify devices as corporate-owned. [Learn more](#)

Type	Platform	versions	Personally owned	Device manufacturer
Android Enterprise (work profile)	AllowBlock	Allow min/max range: 5.0 ✓15.0 ✓	AllowBlock	Manufacturer name
Android device administrator	AllowBlock	Allow min/max range: 5.0 ✓15.0 ✓	AllowBlock	Manufacturer name

Create

Navigation pane on the left side of the Intune admin center. It shows a breadcrumb "Dashboard > Devices". The main heading is "Devices | Enrollment". Below this is a search bar and a list of categories: "Linux", "Device onboarding", "Enrollment" (which is selected and highlighted), "Manage devices", "Configuration", "Compliance", "Conditional access", "Scripts and remediations", "Group Policy analytics", "eSIM cellular profiles (preview)", "Policy sets", "Device categories", "Partner portals", "Manage Windows 365 Cloud PCs", "Cloud PC Overview", and "Monitor Cloud PCs (preview)". At the bottom of the pane, it says "Add or remove favorites by pressing Ctrl+Shift+F".

Main content area for "Device enrollment managers". It has tabs for "Windows", "Apple", "Android", "Corporate device identifiers", "Device enrollment managers" (which is active and underlined), and "Monitor". Below the tabs is a descriptive text: "Add or remove device enrollment managers to allow certain users to enroll larger quantities of devices. [What is a device enrollment manager?](#)". Below this text are action buttons: "+ Add", "Refresh", "Export", and "Delete". A table lists the current enrollment managers:

Android Store app

Deploy Google Play store apps using the app store URL.

You should know:

- Supports device administrator deployments
- Users are redirected to install the app directly from the Google Play store on the device.
- Intune will not report the app's installation status.

Supported enrollment modes:

- Device Administrator

Managed Google Play app

Find and approve apps from the embedded Google Play app store for Android Enterprise devices.

You should know:

- Upload any .apk or .aab file up to 100MB
- Package name must be unique and not already in the Google Play Store.

Supported enrollment modes:

- All Android Enterprise

Add features that are required for BitLocker Drive Encryption?

You cannot install BitLocker Drive Encryption unless the following role services or features are also installed.

Enhanced Storage

- Remote Server Administration Tools
 - Feature Administration Tools
 - BitLocker Drive Encryption Administration Utilities
 - [Tools] BitLocker Recovery Password Viewer
 - [Tools] BitLocker Drive Encryption Tools

☒ Include management tools (if applicable)

Add Features
Cancel

DESTINATION SERVER
PDC.test.local

ption

ter Drive Encryption helps to
t data on lost, stolen, or
ppriately decommissioned
ters by encrypting the entire
e and checking the integrity of
oot components. Data is only
ted if those components are
sfully verified and the
ted drive is located in the
l computer. Integrity checking
is a compatible Trusted
m Module (TPM).

s Server 2008 and Windows Vista

Help:

ils (recommended default).

Backup fails. Backup is not automatically retried.

Recovery passwords and key packages

unlocks access to a BitLocker-protected drive.

Encryption key secured by one or more recovery passwords

recovery when the disk is damaged or corrupted.

This policy setting allows you to manage the Active Directory Domain Services (AD DS) backup of BitLocker Drive Encryption. This policy setting provides an administrative method of recovering data encrypted by BitLocker to prevent data loss due to lack of recovery information. This policy setting is applicable to computers running Windows Server 2008 or Windows Vista.

If you enable this policy setting, BitLocker recovery information is automatically and silently backed up to AD DS. This policy setting is applied when you turn on BitLocker.

Note: You might need to set up appropriate schema extensions and access control settings on the domain before you can use AD DS backup. Information about setting up AD DS backup for BitLocker is available on Microsoft TechNet.

BitLocker recovery information includes the recovery password and some unique identifier data. You can also include the protected drive's encryption key. This key package is secured by one or more recovery passwords and may help you recover data if the drive is damaged or corrupted.

If you select the option to "Require BitLocker backup to AD DS" BitLocker cannot be turned on unless the computer successfully backs up BitLocker recovery information to AD DS. This option is selected by default to help ensure that if the option is not selected, AD DS backup is attempted but network or other backup failures do not prevent BitLocker setup. If the recovery password may not have been stored in AD DS during BitLocker setup.

If you disable or do not configure this policy setting, BitLocker recovery information is not backed up to AD DS.

Note: Trusted Platform Module (TPM) initialization might occur during BitLocker setup. Enable the "Turn on TPM" option.

startup key and PIN with TPM

Help:

This policy setting allows you to configure whether BitLocker requires additional authentication each time the computer starts. You can require a password, a USB flash drive, or a Trusted Platform Module (TPM). This policy setting is applied when you turn on BitLocker.

Note: Only one of the additional authentication options can be required at startup, otherwise a policy error occurs.

If you want to use BitLocker on a computer without a TPM, select the "Allow BitLocker without a compatible TPM" option. When using a startup key, the key information used to encrypt the drive is stored on the USB drive. When the USB key is inserted the access to the drive is authenticated and the drive is accessible. If the USB key is not inserted, the password then you will need to use one of the BitLocker recovery options to access the drive.

On a computer with a compatible TPM, four types of authentication methods can be used at startup to provide access to the drive: the TPM, a USB flash drive, a 20-digit personal identification number (PIN), or both.

If you enable this policy setting, users can configure advanced startup options in the BitLocker setup wizard.

If you disable or do not configure this policy setting, users can configure only basic options on computers with a TPM.

Note: If you want to require the use of a startup PIN and a USB flash drive, you must configure BitLocker settings in the BitLocker Drive Encryption setup wizard.

Store recovery passwords and key packages

Information is stored to AD DS for operating system drives

This policy setting allows you to control how BitLocker-protected operating system drives are recovered in the a information. This policy setting is applied when you turn on BitLocker.

The "Allow certificate-based data recovery agent" check box is used to specify whether a data recovery agent can system drives. Before a data recovery agent can be used it must be added from the Public Key Policies item in ei or the Local Group Policy Editor. Consult the BitLocker Drive Encryption Deployment Guide on Microsoft TechNe recovery agents.

In "Configure user storage of BitLocker recovery information" select whether users are allowed, required, or not a password or a 256-bit recovery key.

Select "Omit recovery options from the BitLocker setup wizard" to prevent users from specifying recovery option means that you will not be able to specify which recovery option to use when you turn on BitLocker, instead BitL determined by the policy setting.

In "Save BitLocker recovery information to Active Directory Domain Services", choose which BitLocker recovery in system drives. If you select "Backup recovery password and key package", both the BitLocker recovery password the key package supports recovering data from a drive that has been physically corrupted. If you select "Backup password is stored in AD DS.

Select the "Do not enable BitLocker until recovery information is stored in AD DS for operating system drives" ch enabling BitLocker unless the computer is connected to the domain and the backup of BitLocker recovery inform

(E:)	
Data Partition)	

BitLocker Drive Encryption (C:)

Choose how much of your drive to encrypt

If you're setting up BitLocker on a new drive or a new PC, you only need to encrypt the part of the drive that's currently being used. BitLocker encrypts new data automatically as you add it.

If you're enabling BitLocker on a PC or drive that's already in use, consider encrypting the entire drive. Encrypting the entire drive ensures that all data is protected—even data that you deleted but that might still contain retrievable info.

☒ Encrypt used disk space only (faster and best for new PCs and drives)
 ☐ Encrypt entire drive (slower but best for PCs and drives already in use)

Set up a work or school account

You'll get access to resources like email, apps, and the network. Connecting your work or school might control some things on this device, such as which settings you can change. For specific info about this, ask them.

Alternate actions:

These actions will set up the device as your organization's and give your organization full control over this device.
